Airframe inspection and maintenance (every 50 flights)
In-field support assistance (one incident/quarter within 120 miles of Boulder)

Simple, Intuitive and Reliable

The Black Swift S1™ was designed as an advanced fully autonomous, yet simple to operate, survey and mapping platform. The combination of the ease-of-use of the Black Swift S1 along with the improved regulations allow new operators to get up and flying quickly. This allows entities needing this data to focus their efforts on using the data and doing the work rather than be primarily focused on UAS operations and certifications.
